

Brave (Chrome) Wallet

e.g. Eterl, Yoroi, NAMI, Typhon

Some wallets allow multiple accounts (addresses), e.g. Eternl, Yoroi, others are just single, e.g. NAMI, Typhon.

Accounts (Addresses)

Accounts (identified by a unique staking key) contain key-pairs, one key for signing transactions and the other as the basis for the address on Cardano e.g. addr1....

Key-pairs are based on a unique set of 24 words.

If you want to move an asset on Cardano from your address, you must sign it with the paired key stored in the wallet data.

Wallet data (e.g. keys) can be stored...

In the Browser

Data is encrypted and accessed via the Spend Password.

You have to store the seed phrase securely (not on your computer).

On a Hardware Device

USB Bluetooth

e.g. Ledger Device

Seed Phrase stored on the Ledger Device and protected by PIN.

Cardano Policy

All assets are created in the context of a policyID.

It is the combination of the PolicyID & Asset Name that identifies an asset.

Assets

Stored on Cardano blockchain

ADA

Base asset (token) for paying transaction fees.

Native Assets

Tokens

e.g. SDC
(Community Utility)

NFTs

e.g. SDI
(Identity, Skills)

Transaction

You can send (move) assets to any address from your address (Account) using a transaction that has been signed using your Address Key.

Send Assets From Your Address to Another Address

Signed using browser spend password or hardware device.

Submitted to Cardano by the Wallet e.g. Eternl.
